Dear Mr. Mayor and Planning Committee,

I am writing to formally lodge my strong objection to the proposed installation of a new 5G cell tower at the above-referenced location. As a local resident, I have significant concerns regarding the implementation of this technology in our community, particularly concerning its potential impact on public health, safety, and the local environment.

My objections are based on the following grounds:

1. Health and Safety Concerns Regarding 5G Radiation

The proposed 5G tower will utilize high-frequency millimeter waves and a higher density of transmitters compared to previous generations. There is a growing body of independent scientific research raising concerns about the long-term biological effects of continuous exposure to radiofrequency (RF) radiation. Many residents, including vulnerable groups such as children, the elderly, and those with pre-existing health conditions, are deeply concerned about the lack of definitive consensus on the safety of prolonged, close-range exposure to these frequencies. Until conclusive, independent long-term studies prove complete safety, the precautionary principle should be applied.

2. Proximity to Residential Areas and Vulnerable Sites

The proposed site is located in close proximity to homes, schools, and community spaces. The continuous emission of RF radiation in areas where citizens sleep, work, and play is unacceptable. High-

radiation infrastructure should not be placed in densely populated residential zones.

3. Environmental and Ecological Impact

Beyond human health, there is insufficient evidence to guarantee that the increased RF radiation will not negatively affect local wildlife. Studies suggest that electromagnetic radiation can disrupt the navigation, breeding, and behavior of birds, bees, and other essential pollinators, threatening local biodiversity.

4. Impact on Local Amenity and Visual Blight

The scale and design of the proposed mast and its associated ground equipment cabinets are entirely out of character with the surrounding area. The structure will constitute a severe visual blight, negatively impacting the visual amenity of the neighborhood and potentially depreciating local property values.

For the reasons outlined above, I urge the planning committee to reject this application and prioritize the well-being and peace of mind of the local community. I request that my objections be formally recorded and taken into full consideration during the decision-making process.

Thank you for your time and attention to this matter.

Sincerely,

Dr. I. Radevski
